

## GENERAL INFO ON THE CALL FOR CAPITALISATION PROJECT PROPOSALS

In the context of this call for proposals, capitalisation projects should capture the most promising short-term results (outputs) and long-term results outcomes (outcomes) of the projects and initiatives identified in the ToRs and aim as follows:

### 1. Transfer and exploitation of results

- Developing innovative approaches/methodologies which combine the knowledge, experience and results of the projects identified in the ToRs and reinforce their impact, reach and magnitude;
- Promoting the re-use and/or transfer of the knowledge and results produced by the projects, extending their impact and geographical scope.

### 2. Reinforcement of networks

- Building new and reinforce existing networks/clusters at national and regional level which associate the organisations coming from the different initiatives as described the ToRs in order to reinforce cross-border and cross-sector cooperation;
- Reaching and involving new target groups/type of stakeholders.

### 3. Strategic dissemination and awareness of policy-makers

- Making the knowledge and results generated by projects more accessible, thus turning data into knowledge;
- Raising awareness and improving communication of results with key sector stakeholders (considering different types of expertise - academic, technical, regulatory, policy, etc. - and geographic levels – including local, regional and national scale);
- Supporting policy-oriented innovations and development by fostering the mainstreaming of good practices into local, regional and national public policies.

Considering the current context marked by COVID-19 pandemic and in view of the global economic downturn, applicants are encouraged to support the development of new intervention models that can foster the socio-economic regeneration across the cooperation area.

In particular, project proposals should integrate innovative actions which focus on:

- The creation of jobs, businesses, startups, social enterprises;
- The transition to carbon-neutral economies in order to maximise the creation of green jobs, businesses and investments;
- The efficient delivery of social care services making most use of technology transfer, innovation and research in the fields of ICT;
- The support to the most vulnerable people, including youth, disabled, unemployed and elderly dependent.

## Overarching Objective B: ADDRESS COMMON CHALLENGES IN ENVIRONMENT

### Thematic Objective B.4: ENVIRONMENTAL PROTECTION, CLIMATE CHANGE ADAPTATION AND MITIGATION

#### Priority B.4.4:

#### Integrated Coastal Zone Management - Incorporate the Ecosystem-Based management approach to ICZM into local development planning, through the improvement of intra-territorial coordination among different stakeholders

The Mediterranean is under a lot of pressure, mainly of anthropogenic nature, seriously threatening seas and coasts. This pressure need to be taken into account for systemic planning, sustainable management, use and monitoring of coastal ecosystems.

One of the main challenges associated with ICZM and maritime spatial planning is the multiple institutional actors involved – including coastal planners, watershed management authorities, shipping authorities, ministries and local communities, to mention just a few.

This fragmentation of responsibilities and competences result in a sectoral approach to coastal management, which targets only a single use (or set of related uses) at a time.

Effectively tackling ICZM – with its complex set of interactions of different drivers and competing environmental, economic, social, cultural and recreational objectives – requires systemic and holistic planning, taking into account how these concurrent and cumulative uses affect ecosystems and allows for the necessary trade-offs and balances among different interests.

Therefore, this priority focuses on strengthening coordination among, and enhancing capacities of, differing relevant administrations and stakeholders, specifically in the areas of planning and monitoring. Joint initiatives aimed at sharing experiences and technologies, including those pertaining to spatial planning, are also considered. All initiatives under this priority have to be conceived in harmony with different relevant national legislation and operational frameworks.

## TABLE OF INDICATORS

<u>EXPECTED RESULTS</u>	<u>RESULT INDICATORS</u>	<u>INDICATIVE LIST OF OUTPUT</u>	<u>OUTPUT INDICATORS</u>
<ul style="list-style-type: none"> <li>Enhanced capacity of public authorities to plan for, sustainably manage, use and monitor their coastal ecosystems, employing an effective participatory approach involving relevant stakeholders and local communities</li> </ul>	<ul style="list-style-type: none"> <li>Newly adopted integrated strategies and tools for sustainable management of coastal areas, etc. that include appropriate reflection of the ecosystem approach and that have been developed through a participatory exercise.</li> </ul>	<ul style="list-style-type: none"> <li>Training activities and workshops addressing different stakeholders to support ecosystem-based planning and management for coastal zones.</li> <li>Spatial planning software, information tools (GIS) and tools for data analysis, data integration and forecasting in support of decisionmakers that contribute to ecosystem assessment and monitoring of Mediterranean coastal zones.</li> <li>Knowledge sharing platforms benefitting local stakeholders involved in coastal planning and management.</li> <li>Communication materials for dissemination and engagement with societal stakeholders and the public at large, e.g. via schools, aquaria, maritime and</li> </ul>	<ul style="list-style-type: none"> <li>Number of replicable or transferable actions to improve or restore the targeted ecosystem.</li> <li>Number of participating organisations that cooperate for improved local governance in coastal zones.</li> <li>Number of organisations and their staff participating in workshops/training.</li> <li>Number of measures adopted to prevent negative impacts of coastal hazards.</li> <li>Number of systemic tools available to strengthen planning, monitoring and management of coastal areas.</li> <li>Number of communication and awareness-raising events.</li> <li>Surface area of habitats supported in order to attain a</li> </ul>
	<ul style="list-style-type: none"> <li>Number of coastal cities, relevant public authorities and other key stakeholders adopting new ICZM plans/guidelines for the sustainable management and use of coastal areas</li> </ul>		

		<p>science museums, etc.</p> <p>✚ Studies and data collection activities aimed at improving knowledge of marine ecosystems and their interlinkages with human activities.</p>	<p>better conservation status.</p> <p>✚ Number of studies, based on data collection activities, studying interlinkages between human activities and the environment.</p>
