ESPON - Policy themes

ESPON delivers territorial evidence for actual policy needs in various areas. The subjects of our user oriented research projects are defined by the European Union, the 32 member states of the **ESPON programme** or even directly by local authorities via so called analysis proposals. This is to guarantee a high usability for the European policy makers who can use ESPON evidence as input to e.g. local development plans.

ESPON projects are divided into long term general "**Applied Research Projects**" and more specific "**Targeted Analyses**".

All of them together have in common that they serve you, whether you are a local policy maker, a government representative, an academic or just someone interested in territorial politics on an European level. ESPON projects follow a place-based approach and encourage capacity building. In order to help you navigate through our various projects, they have been clustered in the following categories:
