ANNALI IDROLOGICI

PER I BACINI CON FOCE AL LITORALE ADRIATICO E JONICO
DAL FIUME FORTORE AL FIUME LATO

2011

PARTE PRIMA

*Redatto giugno 2014
Centro Funzionale Decentrato*

PREFAZIONE

La rete meteopluvioidrologica del Centro Funzionale Decentrato della Regione Puglia (attivato con D.G.R. 2181/2013) deriva dal sistema di monitoraggio gestito dell'Ufficio Idrografico e Mareografico di Bari, trasferito alla Regione a seguito del D. P.C.M. del 24/07/2002 e incorporato nel Servizio Protezione Civile con le competenze di cui all'art. 22 del D.P.R. del 24/01/1991 n°8.

Attualmente la rete copre l'area compresa tra il bacino del fiume Fortore e quello del fiume Lato, comprendente anche l'intero bacino interregionale del fiume Ofanto, per una superficie complessiva di 21.400 kmq.

Essa è funzionale alle attività del Centro Funzionale Decentrato finalizzate a fornire supporto alle decisioni delle autorità di protezione civile, così come indicate nella Direttiva P.C.M. del 27/02/2004 per il sistema di allerta nazionale e regionale per rischio meteo-idrogeologico e idraulico nell'art. 3-bis della Legge n°100/2012 e a quelle finalizzate alla conoscenza idrologica di cui all'art. 22 del D.P.R. n°85/1991 dell'Ufficio Idrografico e Mareografico.

Considerata l'importanza funzionale della rete, il suo funzionamento è assicurato da un servizio di manutenzione periodico e costante che ne assicura un livello elevato di efficienza e affidabilità.

Il sistema di monitoraggio, a seguito dei recenti potenziamenti, è costituito da n°179 stazioni a cui sono collegati 445 sensori (n°153 pluviometri, n°151 termometri, n°29 idrometri, n°44 anemometri, n°63 umidità relativa e di n°4 radiometri), da n°11 ripetitori e da un sistema di controllo centrale.

La rete dal punto di vista funzionale, prevede l'acquisizione in automatico e in tempo reale dei dati preordinati acquisiti dai sensori e la loro trasmissione, via radio in banda UHF, ad un server acquirente del Centro di Controllo alimentando una banca dati residente su un database relazionale SQL server.

I dati così acquisiti successivamente seguono una dicotomia funzionale:

- su una piattaforma sono visualizzate e rappresentate, anche in forma elaborata, i dati in tempo reale per la valutazione delle criticità idrogeologiche e idrauliche attese e/o in atto sul territorio regionale e utili anche per applicazioni di now casting meteorologico;
- su una seconda piattaforma invece, sono elaborati e validati in tempo differito i dati per la successiva pubblicazione e diffusione sugli Annali Idrologici, Parte I e Parte II.

I dati meteopluvioidrologici pubblicati sugli Annali sono utilizzati in diversi ambiti applicativi: nell'ingegneria idraulica, nell'agricoltura, nella pianificazione territoriale per la gestione delle risorse idriche e per la difesa del suolo e costituiscono pertanto un elemento di conoscenza imprescindibile.

*Il Responsabile del Centro Funzionale
Ing. Giuseppe Amoruso*

Termometro a resistenza elettrica Te
Dato incerto ?
Dato mancante >>

Sono stampati in **grassetto** e in *corsivo* rispettivamente
i valori massimi ed i valori minimi

CONTENUTO DELLE TABELLE

Ogni stazione è dotata di un termometro a resistenza elettrica collegato ad un registratore digitale.

- Le stazioni sono ordinate nelle tabelle contenenti i dati secondo la rispettiva posizione idrografica.

- Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

- Le caratteristiche delle stazioni termometriche che hanno funzionato nell'anno sono riportate nell'elenco che precede le tabelle.

TABELLA I. - Sono riportati, per le stazioni che hanno regolarmente funzionato nell'anno, i valori massimi e minimi rilevati nella giornata e le rispettive medie mensili, unitamente alle temperature medie di ogni mese cui si riferiscono le rilevazioni e alle corrispondenti medie del periodo di osservazione (Med. norm.).

TABELLA II. - Per le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle temperature massime e minime osservate nella giornata e le medie mensili ed annue delle temperature diurne. Come <<temperatura diurna>> è assunto il valore della semisomma delle temperature massima e minima osservate in uno stesso giorno.

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno, con indicazione del giorno nel quale sono state osservate.

CONSISTENZA DELLA RETE TERMOMETRICA

al 31 dicembre 2011

Sezione B - PLUVIOMETRIA

ABBREVIAZIONI E SEGNI CONVENZIONALI

Pluviometro registratore su supporto magnetico.....	Pe
Precipitazione nulla	-
Dato incerto	?
Dato mancante.....	>>
Dato interpolato.....	[]

TERMINOLOGIA

1. – *Altezza di precipitazione (mm)*: quoziente del volume di acqua raccolta nel pluviometro (compresa eventualmente la neve fusa) per l'area della superficie orizzontale della bocca tarata ricevente.
2. – *Giorno piovoso*: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.
3. – *Intensità media di precipitazione in un dato intervallo di tempo*: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

CONTENUTO DELLE TABELLE

Le tabelle sono precedute dall'elenco riportante le caratteristiche delle stazioni di osservazione che hanno funzionato in tutto o in parte dell'anno. La stazione pluviometrica consta di un pluviometro del tipo a vaschette basculanti con registrazione elettronica su dispositivi di memoria allo stato solido. Quest'ultima forma di registrazione, applicata in forma sperimentale, è impiegata per la validazione dei valori delle precipitazioni di maggiore intensità e di breve durata riportati nella TABELLA V. La quantità minima di precipitazione strumentalmente rilevabile è pari a 0.2 mm.

TABELLA I. – Per ogni stazione è riportata la quantità di pioggia caduta giornalmente ed i totali mensili ed annui della precipitazione, oltre al numero dei giorni piovosi. Il dato riportato per ogni giorno è riferito alla quantità di pioggia registrata nelle 24 ore. Con il carattere grassetto è stampato il massimo quantitativo giornaliero misurato per ogni mese. TABELLA II. – Per le stesse stazioni di cui alla Tabella I, riporta i totali mensili ed annui delle quantità di precipitazione. Per ciascuna stazione è riportato in grassetto il più elevato dei valori ed in corsivo il più basso.

TABELLA III. – Riporta i dati relativi ai valori più elevati delle precipitazioni registrate nell'anno, per 1, 3, 6, 12 e 24 ore consecutive, appartenenti o meno allo stesso giorno. Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle eventualmente terminate dopo le ore 24 del 31 dicembre.

TABELLA IV. – Per le stazioni che hanno avuto regolare funzionamento, riporta i massimi valori delle precipitazioni verificatesi in 1, 2, 3, 4 e 5 giorni consecutivi, appartenenti o meno allo stesso mese. Per le durate da 2 a 5 giorni, le altezze possono essere talvolta uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata. Sono considerati solamente i periodi il cui inizio cade entro l'anno, anche se eventualmente terminati nell'anno successivo.

TABELLA V. – Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata (5, 15, 30 minuti) registrate dai pluviometri.

METEOROLOGIA

Nella presente Sezione sono riportati per alcune stazioni indicate nelle precedenti Sezioni A e B i valori della pressione atmosferica, dell'umidità relativa, della velocità e della direzione del vento al suolo rilevati con apparecchi registratori.

CONTENUTO DELLE TABELLE

TABELLA I. - Riporta i valori medi giornalieri, mensili ed annui della pressione atmosferica espressa in mm di mercurio, non ridotta al livello del mare.

I valori medi giornalieri della pressione e dell'umidità sono calcolati in base a valori continui, mentre quelli del vento vengono rilevati direttamente dall'apparecchio registratore.

TABELLA II. - Riporta i valori medi giornalieri, mensili ed annui della umidità relativa espressa in centesimi.

Per tutti gli elementi meteorologici riportati in questa Sezione viene adottato il giorno civile, dalle ore 0 alle 24.

TABELLA III. - Riporta i valori giornalieri massimo e medio della velocità del vento (m/s) e i valori di velocità (m/s) e direzione del vento (°N) rilevati alle ore 00:00, 06:00, 12:00 e 18:00.

ABBREVIAZIONI E SEGNI CONVENZIONALI
